Summary

Aspiring Data Scientist and 2026 Cybersecurity & Digital Forensics graduate (B.Tech, VIT Bhopal) specializing in end-to-end ML, Deep Learning, and data analytics pipelines. As a technical team lead, I build production-ready solutions—from multi-modal neural architectures (Transformers, CNN-BiLSTM) and automated network threat classifiers to customer propensity models. I bridge advanced Python engineering, statistical EDA, and dynamic BI visualization (Tableau, Power BI) with a strong security foundation to solve high-stakes problems and deliver measurable impact. Seeking AI/ML and Data Science roles in forward-thinking, security-driven or fintech environments.

Technical Skills

Security Tools	Kali Linux, Burp Suite, Nmap, Wireshark, DVWA, WebGoat, OWASP, Maltego, Autopsy
Languages	Python, Java, SQL, HTML, CSS, JavaScript
Data & AI	Pandas, NumPy, Scikit-learn, TensorFlow/Keras, Matplotlib, Seaborn, NetworkX, Streamlit, Tkinter
Data Visualisation	Power BI, Tableau, Google Looker Studio
Cloud Platforms	AWS, Azure, Google Cloud

Projects

ASRA: Multi-Modal Phishing URL Detection System [Github Repo] *Jan. 2026 – Mar. 2026*

PyTorch, HuggingFace, FastAPI, React.js, CNN-BiLSTM, DistilBERT

- Led the development and engineered the core **Trio-Fusion neural architecture** combining fine-tuned DistilBERT, CNN-BiLSTM, and an MLP domain engine to detect zero-day phishing URLs in real time.
- Engineered a multi-modal fusion layer (1,152 dims) and a novel interaction-based **Danger Score** feature that achieved **96.2% classification accuracy** and **94.8% recall** with sub-second latency ($<$800ms).
- Built and deployed an asynchronous **FastAPI REST backend** and Chrome Extension (Manifest V3) service worker, delivering real-time proactive URL auditing with zero database dependency.

Ransomware Traffic Classification Model [Github Repo] *Aug. 2025*

Python, Random Forest, TensorFlow/Keras, Scikit-learn, Network Security

- Engineered an end-to-end **network traffic classification pipeline** using **Random Forest** and **TensorFlow/Keras**, achieving **94% detection accuracy** across malicious ransomware signatures.
- Automated high-throughput **ETL pipelines** for packet feature extraction, reducing telemetry processing latency and boosting **security incident triage efficiency by 25%**.

Steganography GUI Application [Github Repo] *May 2024*

Python, Tkinter, NumPy, Pillow (PIL), Cryptography

- Developed a multi-threaded **desktop GUI** using **Tkinter** and **NumPy** for pixel-level **LSB (Least Significant Bit)** image steganography, optimizing encoding throughput by **30%** for high-resolution images up to **7 MB**.
- Implemented secure data obfuscation, validation safeguards, and loss-free extraction workflows, ensuring **100% payload integrity** and zero visual distortion artifacts.

Experience

Excelerate — Cyber Risk Assessment and Compliance Intern *Oct. 2025 – Nov. 2025* Remote

- Awarded **Star Performer** (powered by RIT Tiger STRIPES Program) with an **overall 90% score** in 360-degree performance evaluation across technical ownership and problem-solving.
- Identified system vulnerabilities and performed threat simulations, evaluating organizational security postures against **NIST** and **ISO 27001** compliance frameworks.
- Formulated actionable risk mitigation strategies and authored the comprehensive **Cyber Risk Assessment & Compliance Report** to deliver data-driven security recommendations to partners.

Achievements

Smart India Hackathon 2024 — Developed a facial-recognition-based attendance system prototype.
Pupil Leader — Led the student body at St. Ann's School (2018–2019).

Education

VIT Bhopal University — B.Tech Cybersecurity & Digital Forensics, CGPA 8.24/10 *2022 – 2026*

Certifications

IBM Cyber Security Analyst (2025) · Oracle Java Foundations Certified Associate (2025) · High Performing Coding in Java (2025)
